Project

World-Class Multi-Vendor Ecommerce Platform for Bangladesh Proposal
World-Class Multi-Vendor Ecommerce Platform for Bangladesh

Executive Summary

This proposal covers a custom solution for Tiger Bhai based on the shared requirements, matched services, and delivery expectations.

Our Understanding

Based on your requirements, we understand that you need a solution centered around World-Class Multi-Vendor Ecommerce Platform for Bangladesh. The project should be practical for day-to-day use, simple for your team to manage, and flexible enough to grow with your business.

A Bangladesh-first commerce operating system where multiple vendors own their storefronts, but the platform owns trust, discovery, payment

orchestration, and scalability. Hybrid SaaS + marketplace model: vendors pay onboarding + monthly subscription, with optional commissions, ads,

logistics orchestration, and premium services. Mobile-first, Bangla-first, built to compete with Daraz-class platforms.

Seller & Storefront

- 6-gate vendor onboarding (KYC, trade license, TIN/VAT, category approval, catalog QA, sandbox-to-live)
- Multi-store per vendor, tiered subscriptions (Launch/Growth/Pro/Enterprise)
- Store themes, staff accounts, custom domains

Catalog & Discovery

- Product/SKU/variant management with media, pricing, inventory
- Hierarchical category taxonomy with Bangla/English support
- OpenSearch-powered search with BM25 relevance, faceting, filters, typo tolerance
- Personalized feed: trending, flash sales, brand malls, recently viewed

Cart, Checkout & Payments

- Cart with guest + logged-in support, price snapshots
- 3 checkout modes: seller-direct, platform-orchestrated, escrow/trust release

Proposal

PR-20260616-0R2O

- Normalized payment orchestrator across bKash, Nagad, SSLCommerz, COD, cards
- Double-entry financial ledger with settlement batches, holds, reserves
- 10-day max seller payout post-delivery (per Bangladesh digital commerce rules)

Orders & Logistics

- Order lifecycle with status history, payment/fullfillment tracking
- Courier integration with webhook-based shipment tracking
- COD confirmation flows, delivery proof handling

Buyer Experience

- Mobile-first PWA (Next.js) + native Flutter apps
- Chat/messaging between buyers and sellers
- Verified-purchase reviews & ratings
- Push notifications for orders, delivery, offers

Seller Dashboard

- Operational cockpit: today's orders, low-stock alerts, pending payouts, unread chats
- Bulk product upload, campaign management, refund issuance
- Sales analytics, search term performance, catalog health scores

Compliance & Trust

- Bangladesh Digital Commerce Nirdeshika 2021 compliance
- Bangla-language policy, warranty, and delivery disclosure surfaces
- Restricted-goods screening, fraud velocity checks, moderation workflows
- OWASP ASVS security baseline, API rate limiting, PCI scope minimization

Recommended Solution

We recommend a custom solution built around the following service areas:

• Web Development

• POS Software (SaaS)

• E-commerce Development

The proposal will be shaped to fit your operational flow, customer experience goals, and approval process.

Proposal

PR-20260616-0R2O

Scope of Work

• Web Development: Custom website and web application development using modern technologies like Next.js, React, and Node.js

• Web Development includes responsive design

• Web Development includes seo optimized

• Web Development includes cms integration

• Web Development includes analytics setup

• POS Software (SaaS): Complete cloud-based POS system with Django + React, barcode/QR scanner, thermal printer support, and offline mode. Perfect for Bangladesh retail and F&B businesses.

• POS Software (SaaS) includes saas platform (django + react)

• POS Software (SaaS) includes barcode/qr scanner integration

• POS Software (SaaS) includes thermal receipt printer (esc/pos)

• POS Software (SaaS) includes offline mode with auto-sync

• E-commerce Development: Full-featured online store with payment integration and inventory management

• E-commerce Development includes payment gateway (bkash/nagad/stripe)

• E-commerce Development includes inventory management

• E-commerce Development includes order tracking

• E-commerce Development includes admin dashboard

Deliverables

• Production-ready website or web app

• Admin dashboard for content and workflow management

• Mobile-responsive interface

• SEO-friendly structure and metadata

• Launch support and handover documentation

Timeline

We estimate the project will take around 6 to 10 weeks, depending on final scope, revision cycles, and integrations.

Support and Maintenance

• Deployment support

• Bug fixes after launch

• Monthly maintenance if required

• Small content updates and assistance

• Hosting and SSL guidance
